The Beautiful Housing

Picture Description

Top Overview of Shinil Frame
Bottom Warehouse and Shipment

Using over 45 years of experience and technology to satisfy customers in over 60 different countries!

Shinil Frame manufactures environment-friendly Polystyrene Moulding and possesses approximately 200 patent licenses based on 45 years of accumulated technology.

We export products to 60 countries around the world and are recognized for manufacturing top quality moulding products under the brand name MIGA. We are a company priding ourselves on our export record of over 10 million dollars.

Yet, we put interest of our customers first by adding hardwood charcoal for the first time in the industry.

We have successfully focused on promoting health of our clients and with its superior design, MIGA is one of the most sought after mouldings in the industry. Furthermore, Shinil Frame became the first in the world to manufacture PS doors. This was an effort to meet market demands and raise the standard in the door market.

The source of our growth comes from the loyal support of our clients from all over the world and our efforts to return that favor. With this background, we at Shinil Frame promise to provide even better products and excellent services to satisfy our client's needs.

Shinil Frame CEO 노상철

100% Waterproof!

MIGA charcoal flooring has a water resistant core, making it possible to clean with water.

What is SEO?

SEO class eco-friendly raw materials

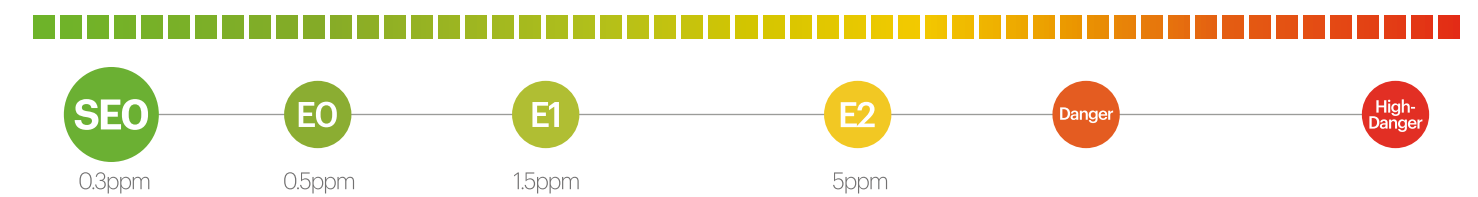

SEO class categorizes the amount of formaldehyde emission (harmful chemical substances). This class has an emission rate of 0.3PPM per 24 hours (almost no emission).

*What is formaldehyde? It is a harmful chemical substance that is a main factor of environmental disease. This can easily come in contact with the human body through air and vapor. Formaldehyde may cause serious health conditions such as skin disease, allergy, vomiting and in the worst case, cancer.

*No. of test report: CT15-094343

Test Items	Unit of measure	Test Results
Amount of formaldehyde emission – Average Value	mg/L	0.3
Amount of formaldehyde emission – Maximum Value	mg/L	0.3

(Standard range for formaldehyde emission)

Structure of MIGA charcoal flooring

What is a calcium board?

MIGA flooring is like a stone: it is water resistant and shock proof. It also retains heat better because it uses the same method as the traditional Korean flat-stone heating system (On-Dol)

Miga flooring has a Noise Absorption Core that helps to prevent over 30% of noise from surface contact. It is highly effective at taking in noises through the floor.

We created the MIGA charcoal flooring with our customers' health in mind: by adding charcoal powder and removing adhesives

MIGA charcoal flooring: pros and cons

Worry free, moisture proof flooring

MIGA charcoal flooring has a water resistant core, making it possible to clean with water. Also, the low shrinking–swelling ratio makes it easy to stall in any weather condition.

The most eco–friendly flooring

What makes MIGA charcoal flooring eco–friendly? It has a formaldehyde emission in the SEO class, contains charcoal powder for customers' health benefits, and doesn't require adhesives to prevent hazards from harmful chemicals.

High heat conductivity and retention

MIGA charcoal flooring helps with insulation and can help cut down on heating expenses. Because the board imitates a flat–stone heating system, it is suitable for On–Dol culture.

*On–Dol: traditional Korean floor heating system
